Yash Borkar

BorkarYash

Profile Summary

Finalyear B.E. Computer Engineering student (CGPA: 7.16 First Class) with a specialization in backend systems and cloud-ready architectures. Proficient in Java, C++, and the MERN stack, with a deep interest in high-concurrency systems and database optimization. Proven ability to build scalable software through internship experience and complex personal engineering projects.

Education

Bachelor of Computer Engineering

Matoshri College of Engineering, Nashik | SGPA: 8.40

Nashik, India
June 2022–2026

Higher Secondary Certificate (HSC) | Gunjkar College of Science | 82.83%

Khamgaon, India
June 2022

Secondary School Certificate (SSC) | Rana Lucky Sananda School | 77.44%

Khamgaon, India
June 2020

Technical Skills

- **Languages:** Java (Core & Advanced), SQL (PostgreSQL, MySQL), C++, JavaScript, HTML/CSS.
- **Frameworks & Technologies:** Spring Boot, Spring Data JPA, Hibernate, ReactJS, Node.js.
- **Cloud & Tools:** Git/GitHub, VS Code, Postman API Testing, Docker (Basics), Maven.
- **Core Concepts:** Multi-threading, Concurrency Control, OOPs, REST APIs, DBMS, Agile, SDLC

Experience

Full Stack Developer Intern- (NetLeap IT Training & Solutions)

(Jan - Feb 2025)

- Developed a multi-sector **Online Appointment System** for professionals (Doctors, Advocates, etc.) using the MERN stack and MySQL.
- Architected an automated **Appointment Management** module and a secure Admin Dashboard.
- Collaborated in an Agile environment to deliver responsive UI components and scalable backend logic.

Projects

High-Concurrency Financial Transaction Engine | Java, Spring Boot, PostgreSQL

- **Engineered a high-concurrency Spring Boot API**, utilizing **PostgreSQL Pessimistic Locking** to completely eliminate race conditions and guarantee 100% data integrity during simultaneous financial transfers.
- **Fortified system reliability** by implementing ACID-compliant **Spring Data JPA** transactions, standardizing JSON error handling, and validating endpoint resilience with **JUnit and Postman**.

Stock Market Simulator | C++, MySQL

- Architected a C++ stock market simulator, building a custom Order Matching Engine with STL containers for highly efficient trade execution.
- Implemented MySQL persistent storage and dynamic price simulation to track user portfolios and generate real-time Profit & Loss (P&L) reports.

Certifications and Achievements

- Full Stack Java Course Completion Certificate
- Employability Skill Development Program - RPG Foundation (Zensar)
- Internship Completion Certificate
